Self-Learning Activity – 20th July 2026

INTE 22303 - Artificial Intelligence

This activity was planned due to the unexpected closure of the university due to Dengue fear!

The students are expected to go through the content recommended here and perform the exercise given in the end. There will be a discussion on this on the 27th of July 2026 during the physical lecture.

Industrial and Systems Engineering

AI is not a stand-alone technology. AI is an enabler of diverse industrial processes. Visit the following website and learn more about the scope of Industrial and Systems Engineering and also who an Industrial and Systems Engineer are.

https://www.iise.org/Details.aspx?id=43631

AI Transformation

The next wave of digital transformation is AI transformation. While many companies have already taken initiatives to adopt AI into their business processes, the level and quality of that adopting is not clear. It would not be a bad idea to explore the global AI transformation initiatives, challenges and opportunities as students of the Department of Industrial Management.

Read the following blog post to understand some expert opinions. Use Notebook LLM and your prompting skills (TRADE, One/Few-Shot, CoT, etc.) to interact with these materials to delve deeper and stimulate your thoughts.

Agentic AI and AI transformation – Insights from the manufacturing sector

Last week you got a hands-on experience of Agentic AI with the popular automation framework N8N. Now it's time to explore the strategic use of agentic AI and implementation scenarios. Read the following two blog posts to understand how agentic AI should be and has been adopted in Manufacturing. Use Notebook LLM and your prompting skills (TRADE, One/Few-Shot, CoT, etc.) to interact with these materials to delve deeper and stimulate your thoughts.

1. https://www.ibm.com/think/topics/agentic-ai-manufacturing
2. https://www.mendix.com/blog/exploring-agentic-ai-industrial-manufacturing/

Exercise

Let's see whether you can put what you learned into action. Take a possible adoption scenario from manufacturing sector and conceptualize how agentic AI can be applied for process improvement. (Don't forget that AI is rapidly becoming AIoT). Make a hand drawn N8N workflow diagram to depict your agentic system. Make sure you name the components clearly.

Submit your diagram as an image through the eKel page.

Note: Make sure you use your own thoughts, learning and intellectual strength, and creativity to engage in this exercise. Using generative AI is strictly prohibited.
